

Windrower by blower

The SOMMIER windrower is simply fitted to any standard three-point tractor hitch. The blower fan is driven by a cardan shaft mounted on the tractor's power take-off.

The floor blowing can be done in strips of 4 to 5 meters wide with a speed of 3 to 4 Km/h on products such as fruits in shell, chestnuts, olives. .. The blower system enables the product to be collected without dirtying it and eliminating leaves, making it easier to collect and clean the row spacing.

- Easily mounted on any standard three-point tractor hitch
- blower/fan driven by cardan
