

Industrial elevator

These conveyors and elevators are designed for higher throughput rates than trough elevators and have a design that allows for the use of wider belts

They are made with a floor composed of U-shaped spaced to limit friction, are fully welded and extremely robust.

Strips with cleats ht 40 or 60mm, straight, inclined or spoon

Standard dimensions from 50cm to 50cm, other lengths on special manufacture

Options :

- Asphalt motor roller for better drive (long length or heavy load)
- 45° flanks for dryer outlets
- Specific outlet channels

Standard Belt Widths	300	400	500	600
Lower hopper widths	700	800	900	1000
